

*For immediate release: February 2009*

## **Synergy Production Laboratories' Medicinal Mushroom Powders Are Ideal for Therapeutic Applications**

Synergy Production Laboratories' (SPL's) certified organic and kosher Synergized® mushroom powders are the most effective medicinal mushroom powders available. They include only the mycelium portion of the mushroom organism, where valuable polysaccharide compounds, such as beta glucans, are highly concentrated.

SPL's line of medicinal mushroom powders includes varieties that have demonstrated the greatest health benefits: Cordyceps sinensis, Agaricus blazei, reishi, shiitake, maitake, lion's mane, and turkey tails. These special fungi contain an abundance of immune-strengthening compounds. In addition, they are high in enzymes, which aid in the digestion of beneficial constituents.

Synergized® mushrooms are grown on a certified organic brown rice, millet, or buckwheat substrate. Using this nutritive, certified organic substrate allows us to avoid the allergens present in commonly used substrates such as soy, and it ensures our mushrooms do not consume pesticide residues.

Synergized® enzymatically active mushroom powders are *the* premium dried mushroom ingredients. SPL's meticulous attention to potency and purity is truly unsurpassed.

### **About us:**

Synergy Production Laboratories™ offers superior-quality certified organic and kosher raw materials for the dietary and nutritional supplement, food, beverage, and cosmetic industries. SPL is fully certified to manufacture certified organic and certified kosher products.
